

ABSTRACT OF THE DISCLOSURE

An ink for fabric printing contains a pigment and a resin emulsion. The weight ratio between the pigment and
5 the resin emulsion by solid basis is between 1:0.7 and 1:3.0. A printing method has a printing step, in which printing is performed by causing the ink for fabric printing to adhere to a fabric; and a fixing step, in which the ink for fabric printing applied to the fabric in the
10 printing step is fixed to the fabric by heating.
